Reasons For Allowance

1. The following is a statement of reasons for the indication of allowable subject matter:

The claims in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest an apparatus for placing a proximal portion of a needle in a target area, where the apparatus includes a first arm being configured to rotatably support a distal portion of the needle about its translational axis, where the device further has a second arm spaced apart from the first arm and configured to support a proximal portion of the needle, and where the second arm is aligned with the first arm so that the first arm and distal portion of the needle are movable toward the second arm, in combination with the rest of the claimed limitations as set forth in claim 1. As to claims 16, 29 and 46, the prior art does not teach the invention including, the first drive mechanism includes a linear guide that configured to restrain motion of the first arm other than in the direction the first arm translated, and a second arm spaced apart from the first arm, configured to support a proximal portion of the needle, where the second arm aligned with the first arm so that the first arm and distal portion of the needle are movable toward the second arm, in combination with the rest of the claimed limitation as set forth in claims 16, 29, 46 and 59. As to claim 26, the prior art does not teach the invention including, the claimed limitation as set forth in claim 1 in combination with the second drive mechanism comprises a gear member secured to the needle and mechanically coupled to a motor such that operation of the motor causes the needle to rotate about its translational axis. As to claim 42, the prior art does not teach the invention including, the claimed limitation as set forth in claim 16 in combination with the second drive mechanism being coupled to the needle and being configured to cause the needle to rotate about the

Art Unit: 3734

translational axis of the needle, and where the second arm further includes a guide mechanism in which the needle is moveably received. As to claims 44 and 45, the prior art does not teach the invention including, the claimed limitation as set forth in claim 42 in combination with a screw coupled to the first arm so the rotation of the screw causes the first arm to translate from the first position, a bi-directional motor coupled to the screw, where the first arm is translated in one of two direction responsive to the direction of rotation of the motor, a rod member, a track, a linear guide that is configured to restrain motion of the first arm other than in the direction the first arm translates, where a sliding member which is configured to slidably engaged the track and which is secured to the first arm, and a coupling mechanism secured to the sliding member and slidably coupling the rod member to the sliding member. As to claims 56 and 57, the prior art does not teach the invention including, the claimed limitation as set forth in claim 26 in combination with the second drive mechanism further included a drive gear that is coupled to the motor and the penetrating member gear member so that the penetrating member gear member rotates responsive to rotation of the drive gear.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
